Markdown: A Simple Language for Writing on the Web

Markdown is a lightweight markup language created in 2004 by John Gruber with contributions from Aaron Swartz.

It allows people to write plain text that can be easily converted into HTML (HyperText Markup Language).

> **Key idea:** Write readable text first — format it later.

Why Markdown Was Created

Before Markdown, writing for the web usually required HTML code.

Problems with HTML writing:

- Complex syntax
- Harder to read while editing
- Slower content creation

The Solution

Markdown was designed to make web writing **simple and readable**.

Made with GAMMA

Main Goal

Markdown helps authors focus on **content rather than format**.

It uses simple symbols to represent formatting.

Easy to learn

Easy to read

Fast to write

Works across many platforms

Basic Markdown Syntax

Markdown uses simple, intuitive symbols to apply formatting to text. Here's a quick reference to the most common syntax elements:

Symbol	Concept	Description	Example
#	Headings	Used to create titles and subtitles. More # symbols indicate a lower heading level.	# Title ## Subtitle ### Section
** *	Emphasis	Apply **bold** or *italic* formatting to text.	**Bold text** *Italic text*
- or 1.	Lists	Used to create ordered and unordered lists.	- Item 1 1. Item 2
[]()	Links	Embed clickable links to web pages.	[Text](https://example.com)
	Images	Insert images into the document.	![Description](image.jpg)
>	Blockquotes	Highlight phrases or references.	> This is a quote
``	Code	Display inline or block code snippets.	`inline code`

Evolution of Markdown

Over time Markdown became widely used in:

- Software development
- Technical documentation
- Academic writing
- Web publishing

Platforms such as **GitHub** and **GitLab** use Markdown extensively. Variants like **GitHub Flavored Markdown (GFM)** added extra features and improved compatibility.

Common Uses

Documentation

Project documentation and README files on GitHub and GitLab.

Blogging

Static site generators like Jekyll and Hugo support Markdown.

Notes & Knowledge Management

Tools such as Obsidian and Notion use Markdown.

Presentations

Frameworks like Reveal.js allow creating slides with Markdown.

Why Markdown Is Popular

Markdown is widely used because it is:

✓ Simple

⚡ Fast

📦 Portable

👁 Human-readable

Today it is one of the most common formats for **technical writing and documentation**.
